

- 1) `getOrders >>` returns :
  - > The customer/order/all-orders page
  - > an object **orders** in the locals
- 2) `orde-list` : will inherit from the parent (`all-orders.ejs`) the **orders** array from the locals
  - >> Needs to loop in the array of orders to render `order-item` templates
  - >> Each template needs the order object to retrieve the details
- 3) the `order-item` :
